

POWERetc METSs Current Probe Kit Facilitates Safe 480V Panel Connected Load Studies

Kit includes thru-panel connector that eliminates need to open or power-down the cabinet to set up NEC 220.87 and Cal OSHPH load studies; the METSs current logger system combined with POWERetc report generation software provides “inspector-ready” compliance documentation

Santa Clara, CA—August 26, 2021—**POWERetc Corporation**, exclusive North American distributor of the

popular [METSs Current Logger](#) for connected load studies, announces the availability of the CCCK-6 Cabinet Current Probe Kit that enables routine panel capacity studies to be performed in 480V panels – without the need to open or power down the panel. The kit includes a 4-phase, 6”-diameter MicroFlex current probe assembly rated at 4000A, a thru-panel cabinet adapter/connector, and an exterior jumper cable to connect the METSs logger to the cabinet connector plug. By facilitating the setup of the METSs logger and **POWERetc’s** custom report generator package, the kit makes it easier to conduct Cal OSHPD (PIN 38 for medical facilities) and NEC 220.87 (Exception Method) connected load studies.

“Panel-capacity connected load studies that comply with NEC 220.87 or OSHPD studies in California medical facilities are very common – and challenging,” said Bruce Lonie, President of **POWERetc**. “Live panel setup of these tests requires use of PPE and, in many cases, powered-down setup isn’t even possible, particularly in hospital environments where critical loads are affected. Our new permanently-installed METSs adapter kit allows facility personnel to safely and quickly conduct these studies without interrupting power.”

POWERetc is the exclusive North American distributor of the METSs current logger. [Click here](#) for complete information about the METSs Logger System. A single complete portable system along with multiple permanently-installed Current Probe Kits – one for each 480V cabinet – will quickly pay for themselves in reduced service costs and power interruptions.

Price: **\$1545** (Portable METSs Logger System Package
(Complete with METSs logger, auxiliary power supply and 4-Phase (3P+N) 4000A MicroFlex bundle - 6" diameter loop - also available with 2" and 15" diameter loops)
\$425 – CCCK-6 (Cabinet Current Probe Kit with 4-phase 6" current loops.)
